Quality is in the eye of the beholder

QUALITY
is in the eye of the beholder

Albert Astals Cid

Quality is in the eye of the beholder
Quality is in the eye of the beholder
What is QUALITY?

- Hard to define

- Hard to measure

  - More bugs means less quality or more users?

- A **very** subjective thing

  - As a user I don't care about any bug, just about **mine**

Quality is in the eye of the beholder

It works for me!

Cool! Let's go for a beer :D

Wait!
I still have a
few minutes

QUALITY and KDE

- We are **BIG** and $_{small}$ – more than 300 repositories, not all with maintainer

- Need more tests + CI

- Need more tools
  - Important crashes
  - Important features
  - Stale reviewboard requests
  - Unreleased bugfixes
- Released bugfixes that don't reach the user

Quality is in the eye of the beholder

THE ALL SEEING TEAM

- Develop more tools

  - e.g. Automatic crash reporting

- Chase 'maintainers'

- Have a global view

- Help with training

Quality is in the eye of the beholder
